

# Mallet Instruments

## Ranges

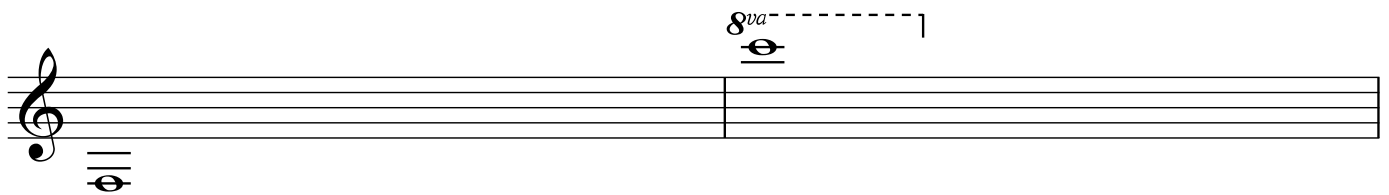

### Orchestra Bells, Glockenspiel

These instruments sound two octaves higher than notated.

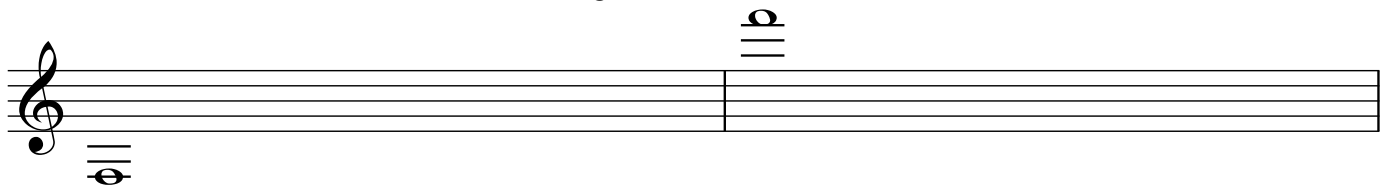

### Xylophone

The xylophone sounds one octave higher than notated. The instrument is made from a hard wood. It has a short dry characteristic sound.

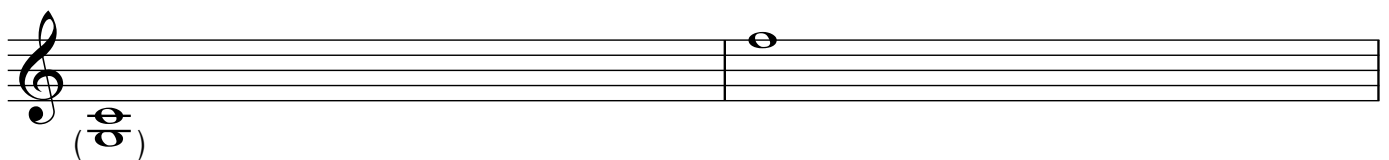

### Vibraphone

The vibraphone sounds at the pitch it is notated. It is made of metal. The vibraphone has a pedal mechanism that allows it to sustain. The bars have a longer duration of vibration.

### Chimes/Tubular Bells

These instruments are large metal cylinders. They are frequently used to recreate the sound of church bells. The ranges of these instruments vary from instrument to instrument. They are traditionally played with a rawhide hammer. They sound at the pitch notated.

### Marimba

Made of a softer wood, this instrument has a softer sound quality. The instrument sounds as written. It also has the largest range. Marimbas can be found to low F, E or C. 8va
